Description

Small Development and High-Value Living

The Foundation of Your Future. This 639sqm residential plot in Kato Deftera represents a sophisticated development opportunity in one of Nicosia's most serene and rapidly evolving suburban enclaves. Falling within the H2 planning zone, the property offers a building density of 90% and a 50% coverage factor, providing the technical capacity for a high-value small development or a spacious custom-designed two-story family residence. This density profile is ideal for a versatile project that balances privacy with investment potential. In March 2026, the Nicosia residential market is experiencing a significant value surge following the landmark January 1st tax reform, which fully abolished stamp duty on all new property contracts and removed the Special Defence Contribution (SDC) on rental income, drastically improving net yields for long-term investors. Furthermore, the 2026 market is characterized by a strong shift toward high-quality suburban living, supported by the government's latest green-building grants and major infrastructure milestones. The plot's superior technical specifications, its regular shape, and its flat surface within a quiet yet centrally located district ensure a secure and appreciating investment, a standard of smart investment we have guided for 3 decades of experience.

Description Residential plot 639sqm located centrally in a quiet area of Kato Deftera with easy access to a main road. The plot has a regular shape with a flat surface. The property falls into residential planning zone H2 with 90% building density, 50% coverage, 2 floors and a maximum height of 8.3m. The plot allows for a modern architectural design that maximizes functional square footage while maintaining a sense of suburban exclusivity. Its position within the Kato Deftera corridor ensures immediate access to essential infrastructure and professional municipal services. Title deed available.
