Description
Small Development and High-Value Living

The Foundation of Your Future. This under-division residential plot in Pano Deftera represents a sophisticated development opportunity in one of Nicosia's most strategically positioned suburban enclaves. Falling within the H2 planning zone, the property offers a building density of 90% and a 50% coverage factor, providing the technical capacity for a high-value small development or a spacious custom-designed family residence. Its location is particularly advantageous in March 2026, as the plot sits just 3–4 minutes from the newly operational sections of the Nicosia Ring Road, which has significantly slashed commute times to the city center and improved regional connectivity following the Phase A delivery and ongoing Phase B3 expansion. The Nicosia residential market is currently experiencing a significant value surge following the landmark January 1st, 2026 tax reform, which fully abolished stamp duty on all new property contracts and removed the Special Defence Contribution on rental income, drastically improving net yields for long-term investors. Furthermore, the 2026 market is characterized by a strong shift toward high-quality suburban living, supported by the government's latest green-building grants and infrastructure upgrades. The plot's superior technical specifications and its placement within a rapidly growing residential district ensure a secure and appreciating investment, a standard of smart investment we have guided for 3 decades of experience.
