Description

High-Yield Development and Strategic Acquisition

This commercial plot in the heart of Palouriotissa represents a high-value opportunity for grand-scale urban development. Falling within the Eß3 planning zone, the property boasts a superior building density of 160% and a 50% coverage factor, allowing for a modern structure of up to 6 storeys. A major financial advantage of this asset is the presence of an obsolete building, which renders the transaction not subject to VAT, providing immediate capital savings for the investor. In March 2026, the Palouriotissa district is undergoing a historic transformation into Nicosia's premier innovation and cultural hub. Following the completion of the 2026 viability study, city officials have moved into the implementation phase for the new SOPAZ Innovation Zone and a state-of-the-art conference and exhibition center nearby. The local real estate market in 2026 is further bolstered by a major tax reform, including the full abolition of stamp duty and the removal of the 3% Special Defence Contribution on rental income, positioning this as an ideal asset for mixed-use commercial yields. For those seeking to capitalize on Nicosia's eastern expansion and the new "Innovation Zone" corridor, this plot offers a secure foundation for 3 decades of experience.

Description Commercial plot available, near the old Palouriotissa cemetery. The plot has a building coefficient of 160% (6 floors) and it is in the heart of Palouriotissa's commercial center with direct access to the center of town, the University of Cyprus and two exits of Nicosia to Limassol and Troodos. Obsolete building in the plot thus no VAT. The property's high density and strategic location make it suitable for a flagship commercial headquarters or a high-yield residential complex catering to the nearby academic and professional communities.
