Description

High-Yield Development and Strategic Acquisition

This corner residential plot in the Palouriotissa area of Nicosia represents an elite opportunity for high-density urban development. Falling within the Kα3 planning zone, the property boasts a substantial building density of 140% and a 50% coverage factor, specifically designated for the erection of a modern four-storey apartment complex reaching up to 17 meters in height. The corner positioning of this site provides a significant architectural advantage, offering enhanced visibility, dual-road frontage for easier access to underground parking, and increased natural light for all units. In March 2026, Palouriotissa has emerged as a focal point for urban redevelopment, driven by its immediate proximity to the capital's central business district and the sustained demand for high-quality housing from young professionals and the academic community. The local real estate market in 2026 is further bolstered by the historic tax overhaul on January 1st, which included the full abolition of stamp duty and the removal of the 3% Special Defence Contribution on rental income, making this an ideal "Build-to-Rent" asset. For those seeking to capitalize on Nicosia's urban growth with a high-yield development, this plot offers a secure foundation for 3 decades of experience.
