### Description

#### Small Development and High-Value Living

This residential asset in the serene Kampia Village represents a premier opportunity for versatile development in one of the Nicosia district's most peaceful and up-and-coming residential zones. Falling within the H2 planning zone with a 90% building density and a 50% coverage factor, the property perfectly balances the potential for a high-yield small development project or a premium private residence with significant outdoor space. In March 2026, the local real estate market has been fundamentally revitalized by the landmark January 1st tax reform, which fully abolished stamp duty on all new property contracts and removed the Special Defence Contribution on rental income, drastically improving the net position for strategic investors. Furthermore, the 2026 market is bolstered by the latest energy-efficiency grants for new primary residences launched on March 2, 2026, offering significant financial incentives for owners incorporating sustainable smart-technologies. The land's registered road access within a developing zone ensures a secure and appreciating asset, a standard of smart investment we have guided for 3 decades of experience.

Description Residential land for sale in Kampia Village, Nicosia. This property offers a clear canvas for high-value development, benefiting from its position in a quiet and developing neighborhood. The plot falls within Residential Planning Zone H2 with a building density coefficient of 90% and a coverage coefficient of 50%, allowing for a maximum of 2 floors and a height of 8.30 meters. This residential land benefits from being part of an authentic community, combining a peaceful living environment with reliable connectivity to the capital's essential services. The 90% building factor is a strategic advantage for those seeking to maximize yield through high-value living units or a spacious custom home, capitalizing on the surging demand for suburban properties in 2026.
