Description

High-Yield Development and Strategic Acquisition

This large residential plot in the Panagia district represents an elite opportunity for high-density urban development in a central and well-established Nicosia neighborhood. Falling within the Kα3 planning zone, the property boasts a substantial building density of 140% and a 50% coverage factor, specifically designated for the erection of a modern four-storey apartment complex or a high-end residential project reaching up to 17 meters in height. In March 2026, the Panagia area has emerged as a focal point for urban redevelopment, driven by its immediate proximity to the capital's central business district and the sustained demand for high-quality housing from young professionals and the academic community. The local real estate market in 2026 is further bolstered by the historic tax overhaul on January 1st, which included the full abolition of stamp duty and the removal of the 3% Special Defence Contribution on rental income, making this an ideal "Build-to-Rent" asset. For those seeking to capitalize on Nicosia's urban growth with a high-yield development, this plot offers a secure foundation for 3 decades of experience.
